

## Measured Change Report

The measured change report demonstrates longitudinal progression of assessment results across your offender population.

This two-page report shows three major components: the change in dynamic risks and protective factors, detailed analysis of dynamic protective factor change, and a detailed analysis of change in dynamic risks.

The first graph aggregates the total dynamic protective and need scores for each first and last assessment, while the following detailed graphs aggregate by each domain's percentage of maximum points available.

Note: Subjects that did not have at least two completed assessments during the time period selected are excluded from the report.

**Big 8**  
AVERAGE SCORES AT ASSESSMENT STAGE

## Risk

AVERAGE RISK SCORES AT ASSESSMENT STAGE (PERCENT OF MAX)

The dynamic risk analysis graph shows the change in dynamic risk factors for your needs assessment, grouped by assessment domain. Downward trends indicate positive progress in your agency. Scores are aggregated by each domain's percentage of maximum points available.

## Protective

AVERAGE PROTECTIVE SCORES AT ASSESSMENT STAGE (PERCENT OF MAX)

The dynamic protective factor graph shows the change in dynamic protective factors for your needs assessment, grouped by assessment domain. Upward trends indicate positive progress in your agency. Scores are aggregated by each domain's percentage of maximum points available.
